

Read the text about technology, and complete the sentences.

English test

Date:.....

Name:.....

What is wearable technology?

Wearable technology, or “wearables”, is the name for the **type** of electronic **devices** we can **wear as** accessories, implanted in our **clothing** or **even** in our body. Wearables are hands-free **gadgets** with microprocessors and a connection to the internet.

Wearables have existed for hundreds of years. **Pocket** watches, which later **became** **wrist**watches, or glasses were some of the first examples in the history of wearable technology. People wore them to have a more comfortable life, and we still do! Glasses help you see, and watches give you helpful information. But modern wearable devices are more complicated. They are electronic, and they use the internet to **collect**, **store** and send different kinds of information.

The first popular electronic wearable technology was Fitness trackers, **like** ‘Fitbits’, which **became** popular in the 2010s. They **monitor** your heart and movement and help you **keep** fit. Now, wearable technology helps people **stay** healthy in new ways. For example, the ‘iTBra’ is a **patch**. Women wear it inside their **bras**, and it checks for breast cancer. ‘Heartguide’ **looks like** a smartwatch, but it can **measure** **blood pressure**. It can also **track** information about a person’s lifestyle, for example, how much they exercise. Then it **shares** this information with a doctor so that the doctor can give **better** **advice**. ‘SmartSleep’ is a soft headband. It helps people to sleep better. It collects information about people’s sleep **patterns**, gives advice and makes sounds to help people **fall asleep**.

However, not all wearables are about health. Some are used for protection or to **find** the place you want to go, and some are just for fun. For example, you can **hug** someone from miles away with a smart jacket! You can also buy smart **jewellery**. These **rings and necklaces** can change colour to match clothes or make-up, or they can **send** the police an alert if you are in danger. And with a smart **hat**, you can listen to music and **answer** calls **without** using headphones!

Completa las oraciones con el nombre correspondiente de cada dispositivo según el texto y la descripción de cada situación.

1. Adam no quiere usar auriculares para música. ¿qué dispositivo puede usar? [Speakers](#)
